What Our Residential Enabling Technology Can Do:

- Capture routines and activities in the home
- Alert/notify the individual and/or their support team if those routines or activities change or are missed
- Remind the individual of a routine or activity
- Promote choice making, problem solving and self-determination
- Create safer opportunities for the dignity of risk
- Replace the need for cameras in the home

It Will...

- Detect if someone hasn't reached a location in the home, such as going from bed to bath
- Alert if someone leaves their bed and approaches a door to the outside
- Alert if the stove is left on

What Our Residential Enabling Technology Can't Do:

It Won't...

- Predict if the person is going to elope
- Shut the stove off automatically
- Guarantee compliance with swallowing the pil
- Automatically call 9-1-1

- Predict a person's behavior
- Prevent a mistake ot undesired outcome
- Alert directly to 9-1-1, EMS, etc

WE'RE ON A MISSION

To connect innovation and independence.

IT IS OUR VISION

To transform care models for the disabled and aging communities, challenging and empowering caregivers, organizations, and policymakers to fully embrace each individual's right to self-determination, independence, and dignity of risk, by providing innovative and affordable technology solutions.

Simply Home

Empowering Organizations & Individuals

*Simply*Home designs and installs innovative and affordable technology solutions that transform how we care for aging, disabled, and veteran populations. Our technology empowers individuals while addressing the concerns of caregivers and family members.

*Simply*Home's sensor-based systems can adapt over time to support independent living skills while alleviating concerns about cooking safety, medication adherence, and the risk of wandering or falls. Caregivers are notified only when they are needed, promoting the highest level of

$80,000 per year savings

Is *Simply*Home cost-effective? David Maennle is an accomplished young man with Down syndrome who directly benefits from assistive technology in North Carolina through the NC Innovations Waiver. David's chosen lifestyle – living independently in the community with the help of technology — saves the State of North Carolina almost $80,000 per year.

How It Works

1 Person-Centered Assessment

Our assessment process is collaborative, bringing together the individual, family members, and staff/caregivers to determine what technology would support the outcomes desired by the individual and increase that person's independence.

2 Designing a Custom System

We provide you with a comprehensive system recommendation that identifies the appropriate devices and services, addresses the individual's priorities and concerns, and ensures a good match between technology and the person's abilities. We also supply a detailed quote so you can make an informed

3 Activating the Technology

*Simply*Home's team installs the system on site and works to ensure that all components are ready to support the client's priorities and goals. Our tech team also provides training for the individual's support team on how to operate

4 Living Independently

With a *Simply*Home system in place, individuals are able to go about their normal activities of daily life, while safety concerns are put at ease. The system can be adapted as the individual's priorities and needs for support

5 Real-Time Alerts & Insights

Each *Simply*Home system comes with customized, real-time alerts. These notifications proactively alert caregivers and loved ones of potential safety concerns or changes in behavioral patterns. Authorized caregivers can gain log into the secure web portal and gain insight from the data logged by the
