

SimplyHome Technology: Concerns Addressed

Calling for Help

When people with disabilities and senior adults choose to live independently, they may need assistance from family members, caregivers, or emergency services. Our *SimplyHome* systems quickly notify the caregiving team when concerns arise about falls, wandering, and other situations where an individual may need assistance.

Cooking Safety

Support individuals during cooking, baking, and meal preparation routines. Caregivers or staff can be alerted if concerns arise, such as the stove or other appliances being left on. This system primarily focuses on skill building and technology in the kitchen, creating support for safety and independence.

Falls & Inactivity

Caregivers are often concerned that living independently means that individuals could fall or experience a crisis and not be able to access help. Our technology senses motion, falls, and inactivity and can alert caregivers, staff, and family members when assistance may be needed.

Wandering & Elopement

Wandering and elopement are key safety issues that often require additional support by staff, caregivers, and family members. Our remote support system can enable staff and caregivers to respond proactively and redirect behaviors when individuals wander or exit the home.

Environmental Controls

Environmental Controls (EC) enable people with physical disabilities, limited mobility, or paralysis to control their home environment. EC systems support residential independence through tablets that use touch or switch controls to manage lights, thermostat, electronics, doors, and other devices.

Medication Safety & Compliance

SimplyHome's secure medication dispensers and remote support systems can prompt individuals to take the appropriate medications on schedule, keep medications secure when it is not time to take them, and provide alerts and notifications if medication is not accessed.

Staff Accountability

The *SimplyHome* Responder app makes it easy to manage teams and streamline client care from any mobile device. Upon arrival at a location, staff can use the Responder app to check in at the location, document their visit, and follow a customized list of assigned tasks. Check-ins can be time- and location-stamped.
