

TECH SPOTLIGHT

# The Firefly Apollo®

## Enhance Independence and Peace of Mind

Firefly Apollo® is SimplyHome's in-home smart sensor system, designed to help those with disabilities or those aging in place live more independently.

With daily routine tracking and safety indicators, it notifies care teams only when intervention is needed via text, phone call, email, or automated announcements. It enhances autonomy, and helps care teams focus their time where it matters most.

Concerns Addressed:

- Sleep Patterns
- Fall Detection
- Medication Compliance
- Overnight Support
- Cooking Safely
- Wandering & Elopement
- Environmental Regulation
- Home Safety

## Core Capabilities

### >> Smart, Customizable Alerts

Firefly Apollo is set up around each person's routines and goals. Sensors flag missed routines, unsafe exits, or unusual activity only when support is needed.

### >> Verbal Prompts & Routine Support

Spoken reminders help individuals stay on track with daily tasks. Supports routines like medication, cooking safety, and morning starts.

### >> Real-Time Notifications

Care teams receive alerts instantly by text, phone, or email. Optional in-home speakers can deliver spoken reminders or prompts.

### >> Insight Over Time

Daily activity is logged so teams can spot trends and changes early. These insights help adjust support while promoting independence.

### >> Person-Centered by Design

Every system is tailored to the individual—not the technology. Alerts and responses match personal needs, preferences, and goals.

## Key Features of the Firefly Apollo®

- Communicates with door sensors, motion sensors, panic pendants, bed and chair sensors, and stove sensors.
- Provides real-time alerts and insights.
- Controls smart thermostats, lightbulbs, door openers, automated door locks, outlet switches, and mechanical faceplate light switches.
- Integration with the Ring Doorbell®.
- 24/7 Response Center option.
- Text, email, phone alerts available.
- Custom verbal prompts.
- Pairs with our Responder App for caregivers and service providers.
- Internet or cellular models available.
- Manage supports for multiple people on one platform.
- Allows you to make real-time adjustments to rules and alerts.

## How It Works

### 1 Set the Outcomes You Want

SimplyHome is set up around each person's goals and the care team's priorities. Authorized users choose outcomes, and the system responds automatically when something happens.

#### Triggers can include:

- » Sensors (stove, motion, water, pressure).
- » Voice commands (on supported systems).
- » Time-based routines.

When a trigger occurs, the system takes action—adjusting devices or alerting caregivers in real time by text or email.

### 3 Launch with Confidence

The secure SimplyHome web portal gives care teams a full view of support over time.

- » Update outcomes and responder settings.
- » Run reports on care activity.
- » Review sensor data and daily living patterns.

These insights help teams adjust support and promote greater independence.

### 2 Manage Care in the SimplyHome App

The SimplyHome app lets providers, families, and caregivers manage care from any mobile device.

- » View schedules, check-ins, and tasks.
- » Access time-stamped visit records.
- » Respond to alerts with one tap.
- » Secure, real-time access to client information.

## Seamless Care with SimplyHome's Remote Support

FIREFLY APOLLO CAN BE PAIRED WITH SIMPLYHOME'S 24/7 REMOTE SUPPORT SERVICES.

When alerts are triggered, trained Remote Direct Support Professionals (rDSPs) respond in real time by audio or video call. They provide verbal assistance, assess the situation, and escalate to in-person DSPs when necessary.

This ensures someone is always there to help on nights, weekends, and hard-to-staff shifts.
